

I am **Your** Partner in Care >

Nathan is a Remedy'sRx Specialty Pharmacy "Partner in Care". He thinks of residents as family, which drives him to provide services at a level he would expect his own family to receive. He is passionate about increasing efficiency without compromising safety, and is always looking for opportunities to implement continuous improvement in pharmacy services.

Nathan helps team members who care for residents understand the role of pharmacists, making the process for managing medications more efficient and less error-prone. When interacting with residents and reviewing their medications, Nathan challenges the need for every medication in order to optimize the resident's well-being.

Outside of direct patient care, Nathan enjoys sharing his pharmacy expertise through serving on numerous committees. In the past he has assisted Interior Health develop a new process for palliative home medication kits in the Central Okanagan, contributed to the study "Medication Wastage in Residential Care Facilities" published in the BCMJ, and served on the Interior Health Committee to develop Palliative Order Sets for Long-term Care and Hospice. He is currently a representative on the Remedy'sRx Specialty Pharmacy Quality Assurance Committee. Nathan also attends twice weekly rounds at the Central Okanagan Hospice House to further fulfill his interest in Palliative Care.

On a personal level, having a wife who is a nurse gives Nathan great respect for the nurses in the homes we partner with. It provides him with perspective to explore how Remedy'sRx can make its customers more efficient, residents safer, and be a true Partner in Care.
